

Upgrade to Internet Explorer 11 to Reduce Risk

Microsoft has announced that it will stop technical support, including security updates, for all browsers except Internet Explorer 11 or its new Edge browser. Microsoft has warned “without critical browser security updates, your PC may become vulnerable to harmful viruses, spyware and other malicious software which can steal or damage your business data and information.”

The IT Services Department is taking care of making sure everyone’s work computer has been updated to Internet Explorer 11. You can always check to make sure by following the instructions below.

If your home Windows-based computer does not have Automatic Updates turned on, please do so by clicking the Check for Updates button on the Windows Update portion of the control panel.

If you are unsure about which version of Internet Explorer you are currently using, you can check by clicking on the gear in the upper right-hand corner of your browser window and clicking on About Internet Explorer in the drop-down menu:

A window will open up telling you which version you are running. If it is not Internet Explorer 11, you will need to upgrade.
